

OPTION

General description

CloudGate Probe is a compact DIN rail mountable metering device that can connect devices over Modbus (RS-485), M-bus, Digital & Analog Inputs to a LoRaWAN network. This permits to monitor assets and buildings remotely in a convenient way.

As a low cost and compact device, the CloudGate Probe can read and transmit data of nearly any meter to any IoT platform. The device can also be used to change settings or the state of an actuator like an HVAC device, control valve, relay, etc.

The CloudGate Probe LoRa is intended to be used in building use cases (i.e. smart building and building management platforms).

Use case: Smart Building

CloudGate Probe can be used as an aggregator that can receive and transmit data from, and to, a master device in a building. Reading multiple meters, via interfaces like Modbus, M-bus or pulse counters, controlling HVAC actuators like heat pumps, ventilation and heating systems and to a limited and safe extent adjusting parameters like temperature, ventilation power, lights, shading, etc.

Use case: Assets monitoring

CloudGate Probe can be built into HVAC assets to allow efficient pro-active maintenance. It also enables a service engineer to know what the situation is like before going on-site. This way service interventions can be scheduled more efficiently.

Combination with CLOUDGATE GATEWAY

In combination with a CloudGate Gateway, the CloudGate Probe LoRaWAN can be used as a slave device to capture the data of multiple assets and send this to a CloudGate Gateway. Here local, or Edge, processing can be applied in such a way that only the most essential part of information is filtered and transferred to a centralized server application that can run on a myriad of Cloud platforms.

Technical Specifications		
Mechanical information	Formfactor / Mounting	DIN-rail mountable device 2 U wide
	Material	PC/ABS
	Weight	74 g
Power supply	DC-powered	24Vdc +/-10%
	Max. power consumption	4W
Technical information	LoRa client	<ul style="list-style-type: none"> 868 MHz or 915 MHz regions External antenna (SMA-RP) LoRaWAN protocol 1.0.3 LoRaWAN class C
	M-Bus mini-master	<ul style="list-style-type: none"> 34V bus power up to 4 Unit Loads Screw terminal connection
	Modbus interface	<ul style="list-style-type: none"> RS485 Half duplex Screw terminal connection
	Analog input	<ul style="list-style-type: none"> Configurable 0-3.3V input conversion 0-10V input conversion 4-20mA input conversion
	Digital input	<ul style="list-style-type: none"> Configurable CMOS input 0-3.3V Dry contact input
	Analog outputs	<ul style="list-style-type: none"> 0-10V output +/-0.01V 4-20mA output +/-1%
	Digital output	<ul style="list-style-type: none"> Configurable CMOS output 0-3.3V Open Drain output (<250mA)
	Optional Last-Gasp backup power	Offering >10s operation following power-outage.
Environmental information	Operating temperature	-20°C to 60°C
	Humidity	5% to 95% relative humidity (noncondensing)
	IP Class	IP20
Certificates	CE Radio Equipment Directive (RED) 2014/53/EU, RoHS/REACH, WEEE
